

A complex network graph visualization showing a large central cluster and several smaller peripheral clusters. The nodes are represented by circles, and the edges are thin black lines. Several nodes are highlighted: a large black circle in the center, a red circle to its right, and several other black circles in various clusters. The graph is highly interconnected, with many edges between nodes within clusters and some edges between clusters. The overall structure is a hub-and-spoke model with a central hub and many smaller clusters radiating outwards.
